invites you to join
a presentation and discussion on

Voyant Tools: Elements of a Text Analysis and Visualization Platform Designed for Digital Humanists

Voyant Tools is a web-based platform designed for reading, analysis, and visualization of digital text collections (voyant-tools.org). It is designed to balance user-friendliness and accessibility with powerful analytic functionality and extensibility. This presentation will introduce Voyant, demonstrate various features, showcase some collaborations, and generally try to describe the potential value of combining humanistic inquiry and computational approaches.

Speaker:

Prof. Stéfán Sinclair

Associate Professor of Digital Humanities at McGill University
President of the Association for Computers and the Humanities
Author (with Geoffrey Rockwell) of *Hermeneutica: Computer-Assisted Interpretation in the Humanities* (MIT Press, 2016)
